

### Agreement about the practice stay in a company in connection with the Marine Engineer education

For the practice stay in a company in connection with the Marine Engineer education has the mentioned company and Fredericia Maskinmesterskole entered agreement about employment of students from the school.

The practice stay in a company has a duration of app. 10 weeks, and in every case the company and the student make an agreement about the progress of the stay under supervision from Fredericia Maskinmesterskole.

This agreement does not oblige neither the company to take students nor the school to provide students, but the agreement is a declaration of intent from both parts. When the company and a student agree upon a practice stay, they make a documented agreement. In this agreement the tasks during the stay are described.

When the agreement is made **Fredericia Maskinmesterskole** is obliged to:

- approve the company according to the criterias for the matter
- point out a person from the school to be the contactperson and responsible for the stay
- inform the company about the aims and objectives of the stay
- set up guidelines for the evaluation of the student's stay
- carry out the evaluation of the stay in cooperation with the company and the student
- participate in solving conflicts between the company and the student

When the agreement is made **the company** is obliged to:

- be informed about the aims and objectives of the stay
- inform the school if the basis to be able to have students are altered
- point out a person to be responsible for the student and the stay
- participate in the evaluation of the stay
- give the individual student an ongoing and an end evaluation
- participate in meetings between the student and the school if necessary
- participate in creating the best environment for the student with respect to his education
- accept visit from the school during the student's stay.

Fredericia Maskinmesterskole

**In the announcement for the Marine Engineer education the requirements for the practice stay in a company are as follows:**

The practice stay in a company has to be carried out in the end of the education. On Fredericia Maskinmesterskole this is carried out within the last term of the education (6. term).

The practice stay in a company (15 ECTS-point) must give the student skills to be able to work developing and trouble shooting oriented as an engineer. The student has to make connections between experience and theory to be able to identify and analyse topics, areas and troubles, which are central in the profession as an engineer. The stay must result in knowledge, skills and values between the education and profession and further more as establishing a network.

---

**In the announcement for the Marine Engineer education the requirements for the bachelorproject are as follows**

The student must learn to work developing oriented with the planning and the accomplishment of a project. The student must make connections between experiences, practical skills and theoretic knowlegde and identify and analyse problems which are central for the profession as an engineer. The student must obtain special knowlegde of a subject, an area or a problem and through the projectwork learn systematic problemformulation and problemtreatment and furthermore collecting and analysing datamaterial – including results from research and development

»-----»

In connection with the practice stay in a company the student is most likely to find a subject, an area or a problem which can be used in connection with the bachelorproject. The student is then able to make a projectformulation and –demarcation and through the stay collect the necessary datamaterial.
